

NFS server onder CentOS7

Begin met een [Clone van de CentOS7 minimal](#)

installatie

```
yum install nfs-utils
```

en aan zetten:

```
systemctl enable rpcbind  
systemctl enable nfs-server
```

```
systemctl start rpcbind  
systemctl start nfs-server  
systemctl start nfs-lock  
systemctl start nfs-idmap
```

Firewall

```
firewall-cmd --permanent --add-service=nfs  
firewall-cmd --permanent --add-service=rpc-bind  
firewall-cmd --permanent --add-service=mountd  
firewall-cmd --reload
```

Server configuratie

```
vi /etc/exports
```

en definieer de geshare-de directory

```
/NFSSHARE    192.168.1.0/24(rw,sync,no_root_squash,no_all_squash)
```

herstart de nfserver:

```
systemctl restart nfs-server
```

Client configuratie

```
yum install nfs-utils
```

```
showmount -e 192.168.1.X
```

mount 192.168.1.X:/NFSAHARE /mnt/nfs
