

OpenVPN client op CentOS7

installatie

Verbind met de repository:

```
yum -y install epel-release
```

Installeer de client software:

```
yum -y install openvpn
```

configuratie

Maak de configuratiefile aan:

```
vi /etc/openvpn/somevpnsite.conf
```

en zet hier in:

```
dev tun
tls-client

remote server.example.com 1194

pull

proto udp
lport 123
script-security 2

dh dh2048.pem
ca OpenVPN_CA.crt
cert OpenVPNclient.crt
key OpenVPNclient.key

comp-lzo

reneg-sec 0

auth-user-pass somemore.txt
```

De username en password zet je in somemore.txt

```
vpnusername
Pa5SW0rd
```

haal de certificaten over van de server en/of de CA server:

```
dh2048.pem
```

OpenVPN_CA.crt
OpenVPNclient.crt
OpenVPNclient.key

starten

start de net geconfigureerde VPN tunnel door:
`systemctl enable openvpn@somevpnsite.service`
`systemctl start openvpn@somevpnsite.service`
