

connect OpenCode to VSCodium

VSCodium is a community-driven, fully open-source binary distribution of Visual Studio Code (VS Code), built from the same open-source repository (Code-OSS) but without Microsoft's proprietary components.

install opencode plugin

The most used opencode plugins for VSCode have issues when installed in VSCodium except **OpenChamber**.

in the left sidebar select **Extentions(Ctrl+Shift+X)** in the search bar type **OpenChamber** and in the list press **Install**.

set link to opencode instance

Now that the plugin is installed we set it up with the URL of the previously installed opencode server.

navigate to **File → Preferences → Settings**

In the window that opens, in the left pane expand **>Exstentions** and select **OpenChamber**

in the field **Api Url** enter `http://localhost:4096`.

Leave the **Opencode Binary** empty.

start

Test by pressing the cube like icon in the top right of the VSCodium interface. A panel opens and at the bottom you can choose a model.
