

connect OpenCode to VSCodium

VSCodium is a community-driven, fully open-source binary distribution of Visual Studio Code (VS Code), built from the same open-source repository (Code-OSS) but without Microsoft's proprietary components.

opencode plugin

The most used opencode plugins for VSCode have issues when installed in VSCodium except **OpenChamber**.

Install OpenChamber plugin:

in the left sidebar select **Extentions(Ctrl+Shift+X)** in the search bar type **OpenChamber** and in the list press **Install**.

set link to opencode instance

Now that the plugin is installed we set it up with the URL of the previously installed opencode server.

navigate to **File → Preferences → Settings** In the window that opens, in the left pane expand >Exstentions and select OpenChamber in the field Api Url enter <http://localhost:4096>. Leave the Opencode Binary** empty.

start and test by pressing the cube like icon in the top right of the VSCodium interface.
